

## **Job Title: Software Developer**

PFE Express are an industry-leading forwarding and logistics company. We are seeking a software developer that will be responsible for delivering quality software and solutions. You will be introduced to a wide range of situations that will challenge both your technical and business skills. In this Software Developer role, you will get technically stuck into the design, development, and implementation of PFE's tailored software solutions.

What does the Ideal Candidate look like?

- 3+ years of software development experience
- You are a confident, self-assured communicator who can relay technical information to technical and non-technical audiences
- Strong backend development experience in SQL, PHP, C++ or C# and strong frontend development experience PHP
- Bachelor's Degree in Computer Science, Information Technology or related field would be desirable
- Experience of Linux would be desirable

Your Duties:

- Implementing new functionality using a variety of software tools e.g., SQL, PHP, C#, C++ PHP
- Developing and implementing changes in internal products including the continued development of our Vision system used by our customers and overseas agents
- Creating front facing tools and reports that integrate with our Operational System
- Developing, maintaining and documenting APIs for third party use
- Managing build and deployment tools
- Ability to learn new concepts quickly and use technology to guide and solve business problems
- Knowledge of relational databases and ability to use a diverse range of data sources
- Providing reliable solutions for different departments to improve the efficiency and accuracy of daily tasks
- Working with large datasets and creating multiple custom, fast, responsive views
- Comfortable working with different departments and a broad range of team members
